

What MADLA Ai can do

A Czech AI office on its own infrastructure: one chat with specialists, voice, website and image creation, search, maps, office tools and company workspaces. Every feature comes with a real screenshot. Status as of 20 October 2026.

FEATURES WITH SCREENSHOTS

MOBILE SCREENS

MORE CAPABILITIES

The basics — one chat, a whole office what MADLA is

3

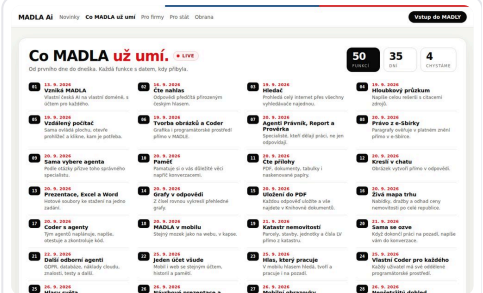

Chat with agents

One chat. Based on your question, MADLA brings in the right specialist (Lawyer, Due Diligence, Report, Real Estate, Finance, Search...) together with the right tools.

Sign-in and registration

Account with e-mail verification, Google sign-in and two-factor authentication (Microsoft Authenticator). Pricing is visible without an account.

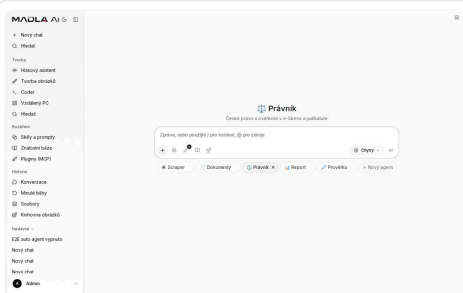

Live feature overview

A self-updating list of finished features right in the app (54 today). Everything is deployed and running — not a roadmap.

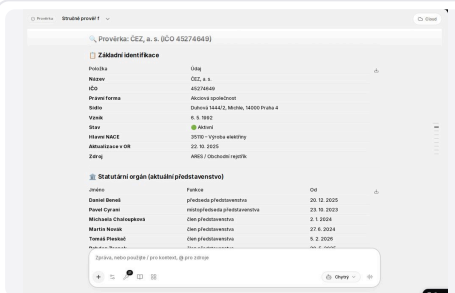

Chat, agents and background work specialists, oversight and privacy

5

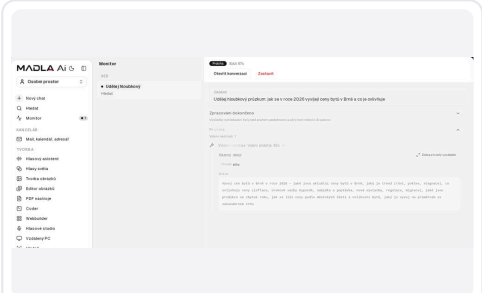

Lawyer agent

Answers from Czech legislation and case law and verifies that every cited section really exists.

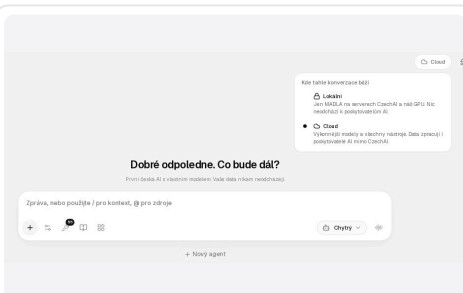

Company due diligence in chat

Enter a company ID and MADLA builds a due-diligence report: register, directors, insolvency, sanctions, courts. Every fact has a source.

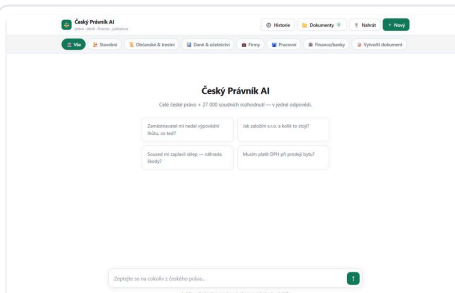

Monitor — what runs in the background

See what MADLA is doing right now (here a deep research task), step by step. Open or stop any task at any time.

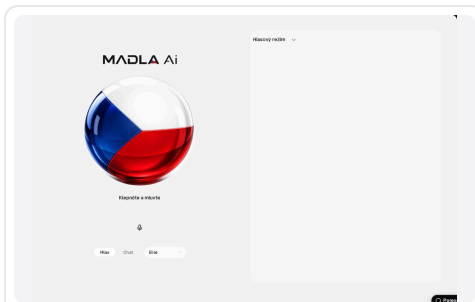

Local zone or cloud

For each conversation you choose where it runs: locally on our own servers and GPUs only, or in the cloud with more powerful models.

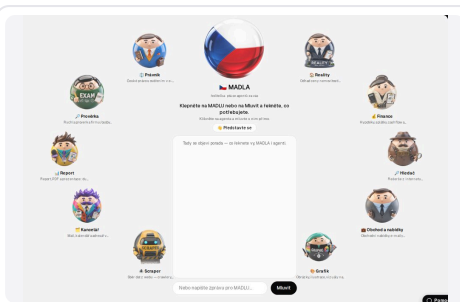

Due diligence and law

Checks a company or a contract against registers, sanctions lists, insolvency records and courts — and shows where every fact comes from.

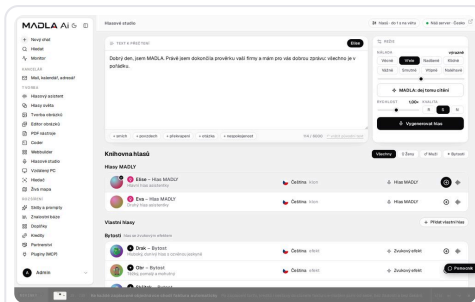

Voice assistant

Ask out loud, MADLA answers out loud. On the web and on mobile; dictation in the local zone runs on our own speech recognition.

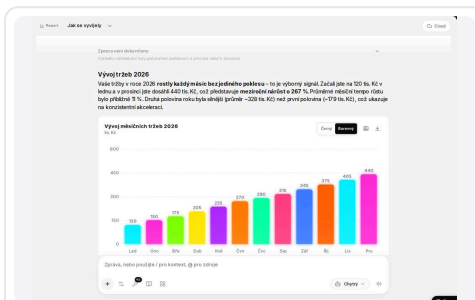

Voices of the World — a team meeting

A live voice meeting: MADLA chairs it, surrounded by a team of specialists, each with their own voice. Tap one to talk to them alone.

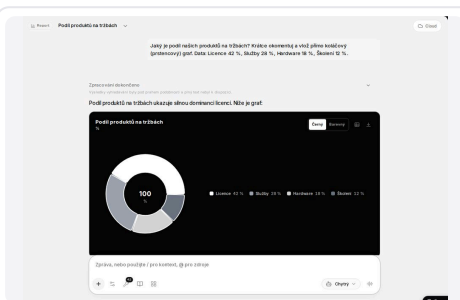

Voice studio

23 voices, 8 characters and your own voice cloned from a short recording. Ads, audiobooks, characters — it can add emotion to any text.

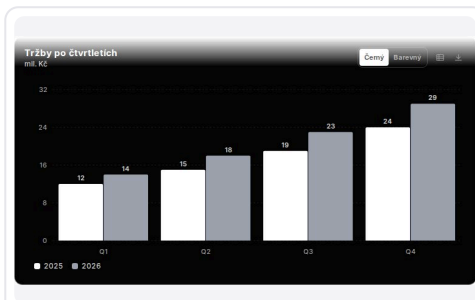

A chart right in the answer

When data is worth visualising, MADLA draws a chart next to the text. Download it as PNG or view it as a table.

Pie, line, area

It picks the chart type from the data: shares as a pie, trends as a line, comparisons as bars.

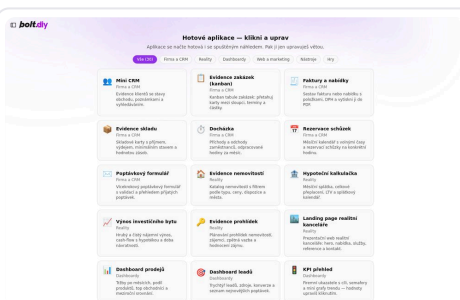

Black print style

A dense black-and-white chart for formal and printed documents. Same chart, two looks, one click to switch.

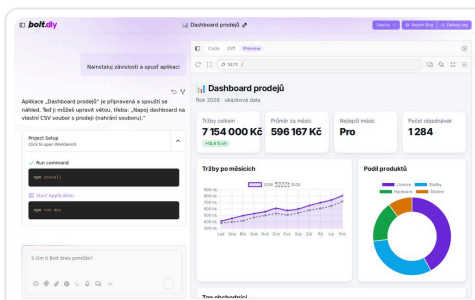

Webbuilder

Builds a working website or app from a single sentence, right inside MADLA — preview and edits in one place.

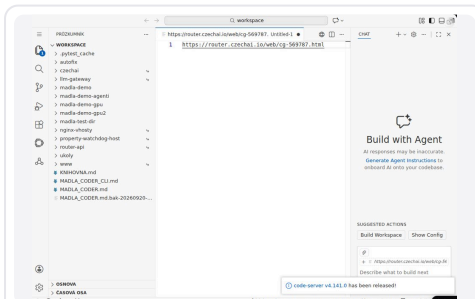

30 ready-made templates

Dashboards, games, tools. You never start from a blank page.

A result from one sentence

The sentence “make a sales dashboard” becomes a running app with charts, not a static picture.

Coder

A development environment with an editor, terminal and AI agents. Every customer gets their own; tasks can also be assigned with a sentence in the chat.

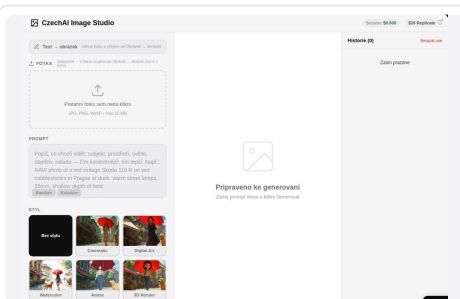

Image generation

An image from a description, or edits to an uploaded photo — in its own studio and in the chat.

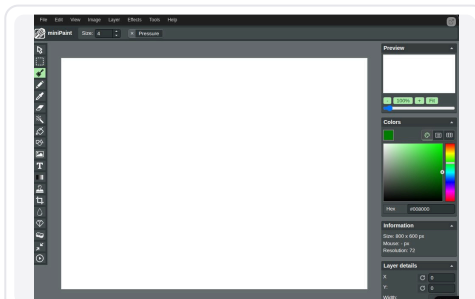

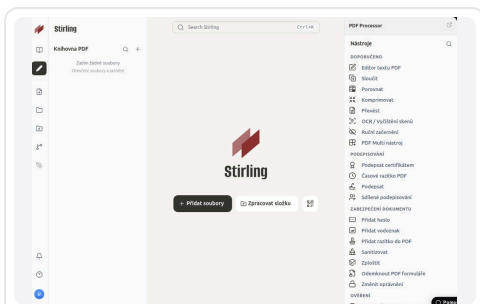

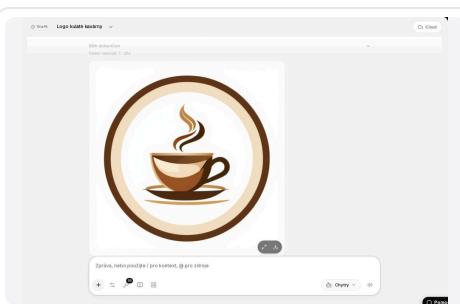

Image editor

An editor with layers and tools right in the app, no extra software.

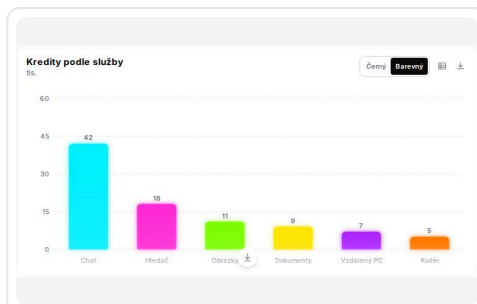

PDF tools

Merge, split, rotate, convert and sign PDFs.

Images right in the chat

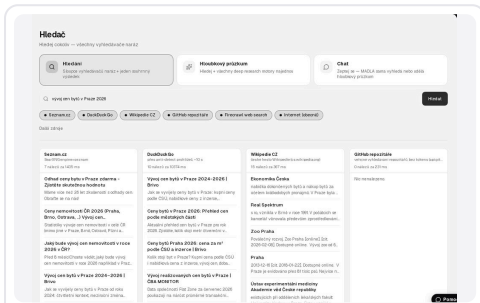

Type “draw a café logo” and the image appears right in the conversation, generated on our own GPU.

Reports with charts

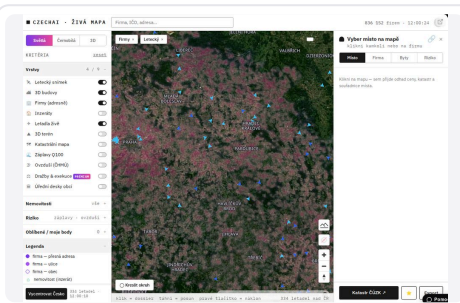

A report, a PDF or a designed presentation from your data in one step.

Search, maps and office

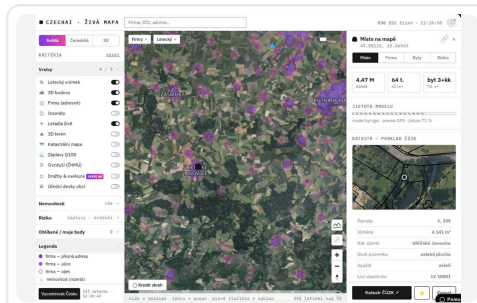

Search — in action

Searches many search engines at once and lines the results up in columns. Deep research writes a report with citations.

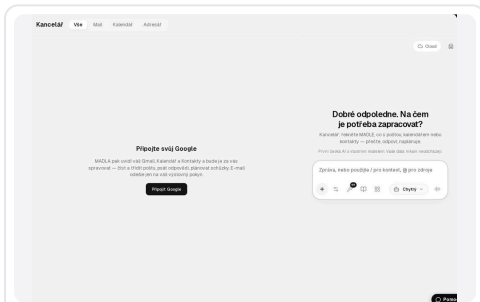

Live Map — the whole Czech Republic

Listings, auctions, forests and location data on one map; light, black-and-white and 3D modes.

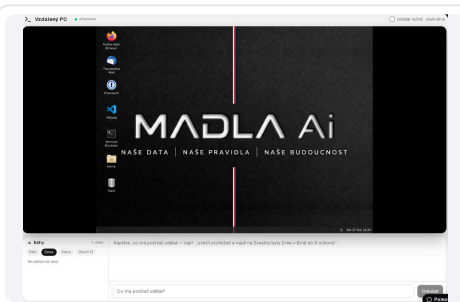

Live Map — place detail

Click a place: the land-registry parcel (title deed number, area, land type) and a price estimate.

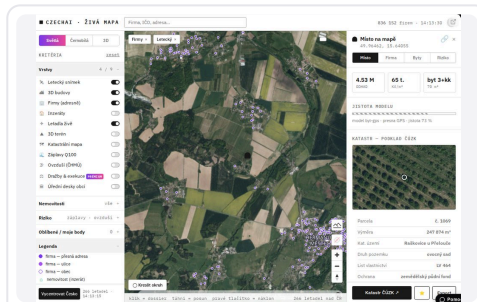

Office

Connect your own Google account and MADLA reads and drafts e-mails and manages your calendar and contacts.

Remote computer

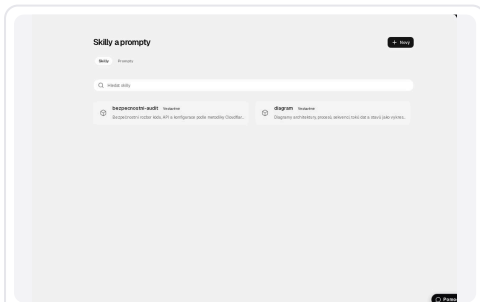

MADLA gets its own computer with a desktop and clicks and types on it by itself: browses websites, fills in forms, processes files.

Map up close

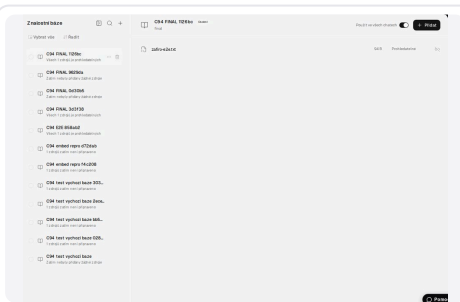

Zoom right down to individual houses with aerial imagery.

Extensions and history

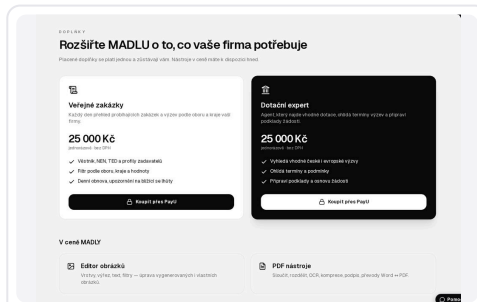

Skills and prompts

A library of skills and ready-made prompts for repeated work.

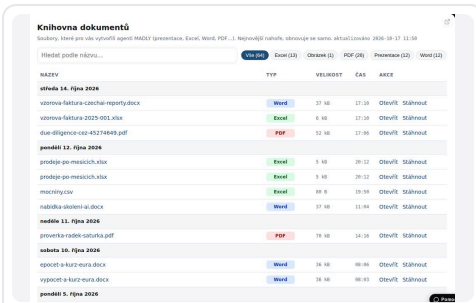

Knowledge base

Uploaded documents become MADLA's memory and it quotes from them. Turn it on for all chats or share it with your company.

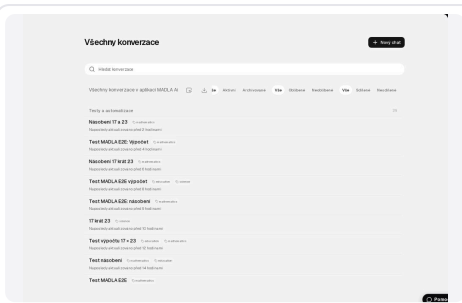

Add-ons

Extra modules: Public Tenders and Grant Expert watch for calls and prepare the paperwork.

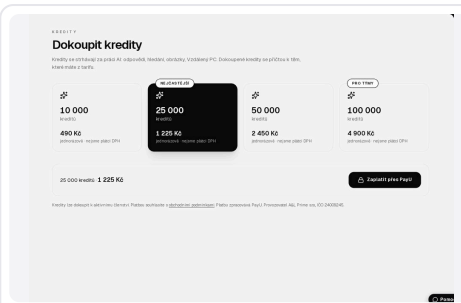

Document library

All generated Word, Excel, PDF and presentation files in one place; everyone sees only their own.

Conversations

The history of all conversations, with search and favourites.

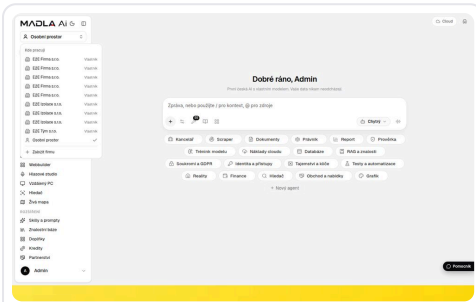

Credits

One credit balance for everything: chat, voice, images, Coder and Remote PC. Top-up packs of 10,000–100,000.

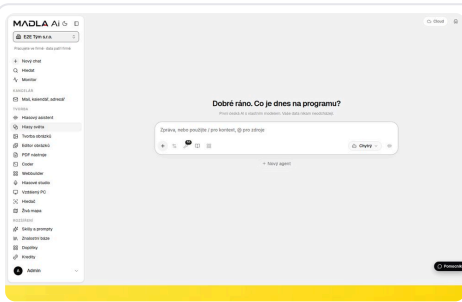

For companies separate company workspaces and administration

9

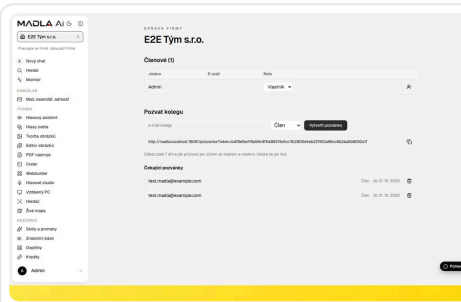

“Where I work” switch

Your personal space and your company are kept apart: conversations, files, knowledge and agents.

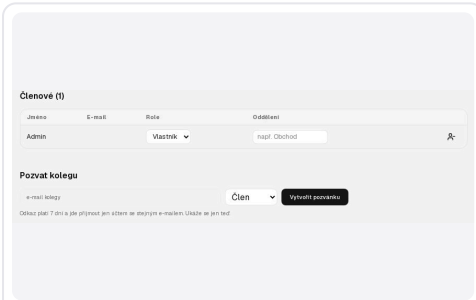

Company data isolation

Only company members can see company data. The separation is enforced in the database itself.

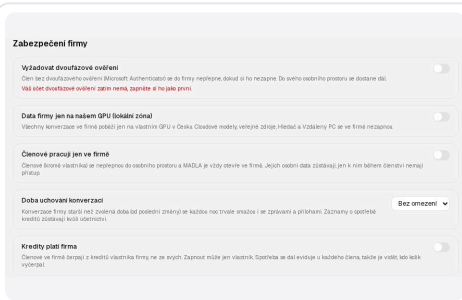

Company and seat management

The admin sees seats in use (“N of M”) and invites colleagues by invitation or through a verified domain.

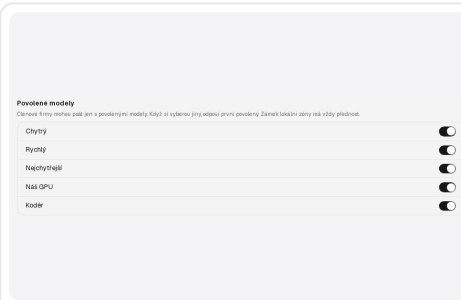

Members, roles and departments

Owner, admin, member and auditor roles. Knowledge bases and agents can be shared with the whole company or just one department.

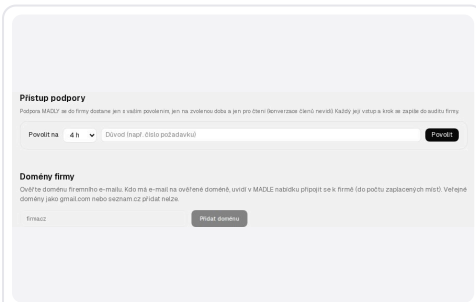

Company security

Mandatory two-factor authentication, company data on our own GPU only, work inside the company only, conversation retention periods, company-paid credits.

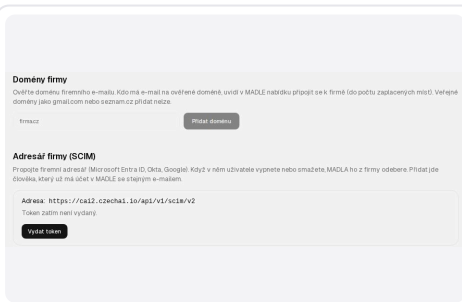

Allowed models and tools

The company decides which models and tool groups its members may use.

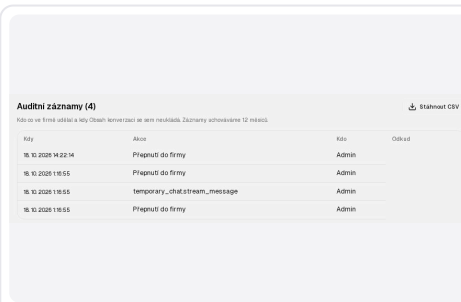

Support access only with permission

Support can see the company only after approval, for a set time and read-only. Every step is recorded in the audit log.

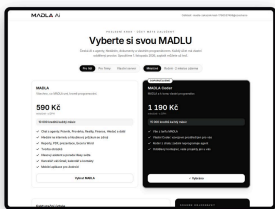

Domains and directory (SCIM)

A verified company domain offers colleagues to join. Directory sync (Entra ID, Okta, Google) removes people who leave.

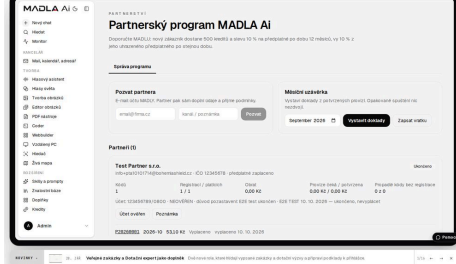

Audit log

Who did what in the company and when, with CSV export. Records are tamper-proof (hash chain) and kept for 12 months.

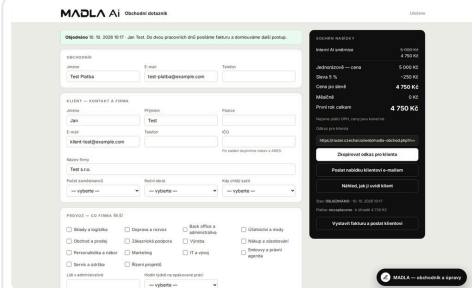

Pricing and plans

Plans for individuals, companies and on-premise servers; monthly or yearly. Payment via PayU with automatic invoicing.

Partner program

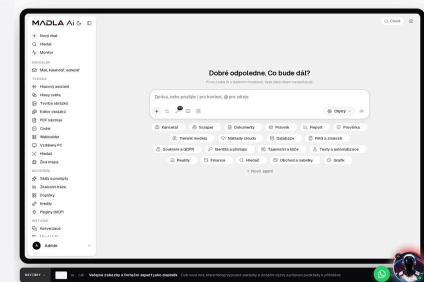

A partner shares a promo code, the customer gets a discount and credits, the partner earns a commission. Fully automatic.

Sales tool

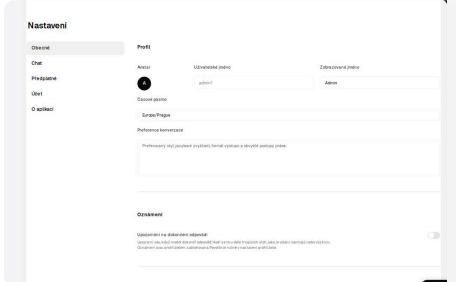

A salesperson builds an offer and sends an invoice or payment link; the client orders online.

Look and feel adapts to everyone

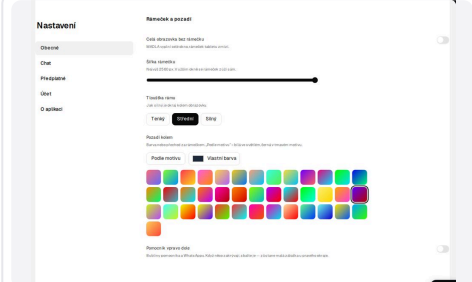

Tablet frame

The app in an elegant frame; one switch makes it full screen.

Appearance settings

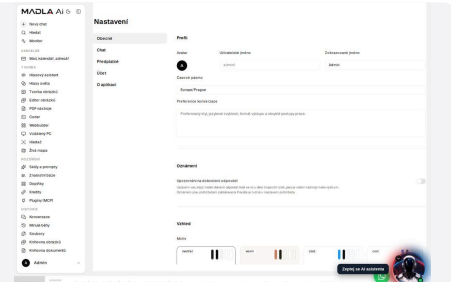

Light, dark or system theme, font size, frame width and thickness. Saved to your account.

40 colour gradients

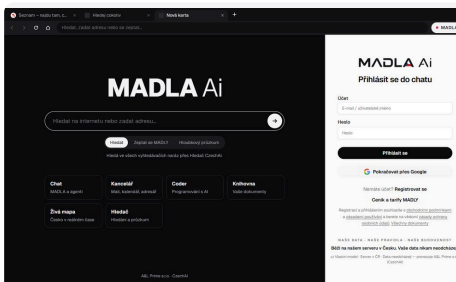

A theme background, your own colour, or one of 40 gradients.

Desktop and browser apps the same sign-in and memory everywhere

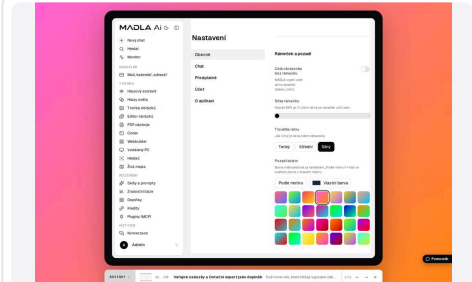

MADLA on your computer

The full interface in your browser, full screen, with the helper and news feed.

Our own browser

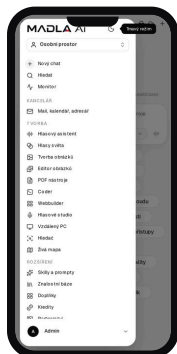

A browser with MADLA built in next to every page.

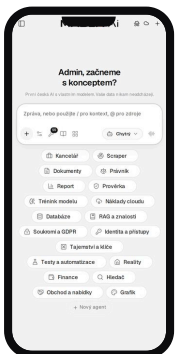

On tablets and narrow windows

The interface adapts to the width; frame and background as you like.

Coder
code on your phone

And what else MADLA can do across the whole app

- **Automation in a sentence** — “every weekday at 7:00 send me a tender overview” — and MADLA does it on its own
- **Automatic agent selection** — assigns the right specialist and tools based on your question
- **Save an answer** — any answer as .md or PDF in one click
- **Property price estimate** — from location and parameters, stating how precise the location was
- **Company agents and knowledge** — shared with the whole company or just a department
- **Encrypted backups** — stored off-server, with a test restore every month
- **Coder from the chat** — “program me...” — Coder does the job and posts a link to the result in the chat
- **User memory** — remembers important facts across conversations; can be switched off
- **Translation and proofreading of .docx** — keeping headings and tables intact
- **Land registry** — parcels, title deed numbers, areas and protections from official data
- **Coder and Remote PC for companies** — separate from personal ones; closed within a minute when someone leaves
- **Account deletion (GDPR)** — deletes data in every workspace the account belonged to
- **Web page change watcher** — “watch this page for me” — changes arrive as a message in the conversation
- **Documents and presentations** — Word, Excel, PDF, designed presentations and reports
- **Read aloud** — a natural voice; in the local zone from our own GPU
- **Files in the chat** — reads and compares PDF, Word, Excel and scans (OCR)
- **Company credits** — paid by the owner, with an optional monthly limit per member
- **Interface in three languages** — Czech, English, Chinese
